12. Other Farm Animals	0	135	52	0	187
13. Other Animals	0	974	65	0	1039

ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL (Chief Executive Officer (C.E.O.) or Legally Responsible Institutional Official (I.O.)) I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

University of Kansas Medical Center – Customer ID: 1460
Column E Explanation

The justification for the animals listed in column E of the annual report is listed below.

1. Registration Number: 48-R-0003
2. Number of animals used in this study: 6
3. Species (common name) of animals used in this study: non-human primates
4. Explain the procedure producing pain and/or distress.

The potentially painful or distressful procedures involved in this study include disease progression, morphine withdrawal and desensitization to morphine.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

As stated in the IACUC-approved protocol, morphine has a profound effect on the immune system by its ability to prevent development of cell-mediated immunity (CMI) responses against intracellular pathogens. This effect has important implications for the pathogenesis of Human Immunodeficiency Virus (HIV) infection, especially NeuroAIDS. First, morphine modifies the receptor used by the virus to infect macrophages, and this potentially causes enhancement of infection in these cells. Because macrophages are the main cells in the brain that support replication of the virus, the effect of morphine would be to enhance the infection in the brain. Second, morphine-mediated suppression of production of IFNgamma would abolish anti-HIV CMI responses, the major component of the immune system, responsible for controlling replication of the virus. Loss of CMI would therefore predict continuous and more robust replication of the virus in the brain. Third, cessation of morphine intake results in recovery of previously abolished CMI responses. Such an occurrence in the HIV-infected individual would result in reconstitution of the antiviral CMI response in brains that have large amounts of viral antigen, and this could precipitate severe encephalitis. The researcher uses the morphine-Simian Immunodeficiency Virus (SIV) model to explore these concepts.

All non-human primates in this protocol are infected with simian immunodeficiency virus (SIV). Additionally, a subgroup receives injections of morphine 3 times/day to produce well maintained morphine dependence, and another control subgroup receives saline injections. Use of analgesic and/or anxiolytic drugs as supplements to morphine, or in the subgroup of non-human primates not receiving morphine, would compromise the results. These analgesic and anxiolytic drugs are known to interact with the immune system (e.g. Mitrova & Mayer, 1976; Ferrarese et al., 1993; Ghosh & Chattopadhyay, 1993; Burdo et al, 2006; Cho 2007). Because the saline subgroup of monkeys serves as a

48 Nov 03

control for the morphine group, treating the saline subgroup with analgesic/anxiolytic drugs would compromise the interpretation of data.

Column E Explanation

1. Registration Number: 48-R-0111
2. Number 1 of animals used in this study.
3. Species (common name) Dog of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animal was given a daily dose via oral gavage for 10 days prior to being found dead during post dose observations on study day 10. This animal had a seizure that was treatment on Day 1. In addition, at various times between study Days 1 and 10, body tremors, decreased activity, emesis, increased salivation and squinting eyes were recorded.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

No evidence of seizure was found after Day 1. None of the other observations were considered to require treatment or euthanasia.

6. What, if any; federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g. APHIS, 9 CFR 113.102):

The goal of this nonclinical toxicology evaluation was to characterize any toxic effects in regards to target organs, behavior, dose dependence, and exposure as required by 21 CFR 312.23 and ICH M3 (R2).

Column E Explanation

1. Registration Number: 48-R-0111
2. Number 1 of animals used in this study.
3. Species (common name) Dog of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animal was given a daily test article dose via subcutaneous injection and an oral dose of and secondary formulation via oral gavage for 6 days prior to being found dead on study day 7. Animal had been observed to have body tremors, decreased activity, emesis, dehydration, squinting eyes and occasionally cold to touch at various times on study days 1-6.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

This animal was showing declining activity and food consumption over several days and was treated with food supplementation. Behavioral decline occurred rapidly on Day 6. This animal was treated aggressively on Day 6 with fluids and warming and was responsive and standing but was found dead early on Day 7. Had this animal not shown response to the fluids and warming, it would have been euthanized on that day.

6. What, if any; federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g. APHIS, 9 CFR 113.102):

The goal of this nonclinical toxicology evaluation was to characterize any toxic effects in regards to target organs, behavior, dose dependence, and exposure as required by 21 CFR 312.23 and ICH M3 (R2).

Exceptions to the Animal Welfare Regulations and Standards

1. **Title and Section of AWR for which IACUC approved exception was granted:** 9CFR Ch 1, 3.11 b 3
2. **Description and Rationale:** Studies involving flea infestation: During flea infestation, it is requested that no chemical or disinfectant be used to clean the runs in which dogs are housed. Chemicals and disinfectants could potentially have an impact (kill) on fleas if the chemicals and disinfectants contact the hair coats of the dogs. Runs are cleaned with water until flea infestations are complete, and then sanitized with chemical disinfectants.
3. **Species and number affected:** Dog, 36
